Soils can become acidic or sour in several ways. Heavy rainfall can wash nutrients out of the soil, leaving behind acid-forming elements. Ammonium-based fertilizers encourage a more acidic soil, as does the natural breakdown of organic matter. A slightly acidic soil is preferred, but plant growth and yield can suffer if soils become too acidic. Lilly Miller Super Sweet blend gives you the best of both worlds.

Scheurich Ceramic Flower Pot Zen

Scheurich's series Zen symbolically represents the simple elegance, so evident in Japanese art and culture, showing that mindfulness can be integrated easily. While the smooth surface picks up the clear line of the Far East design trend, the crafted looking finish physically embodies the connectedness of Zen with nature. All pots are 100% watertight and are ideal partners for succulents, cacti or fern.

Garden Weasel® Core Aerator

Helps bring new life to lawns with compact soil. Symptoms of compact soil include: thin turf, with poor color, and bare patches that do not respond to watering or fertilizer. Compact soil creates a barrier that keeps water and air from reaching grass roots and providing vital nutrients. The Weasel Core Aerator also stimulates root growth by "pruning" the roots, as well as providing lawn surface nutrients.

A man with a beard and short brown hair, wearing a white t-shirt and yellow overalls, is shown from the waist up. He is holding a brown plastic pot containing a flowering plant with pink and red blossoms. He is looking down at the plant with a focused expression. The background is a greenhouse with a translucent, ribbed plastic covering.
